Source: Korea Ministry of Food and Drug Safety import notification database. Importer names translated from Korean using curated lookup; exporter names appear as recorded in MFDS source data.

① Why do different sources show different import volumes?

Why the chart and table show different figures

The numbers are not directly comparable, and neither is wrong — they come from two distinct MFDS databases covering different import channels.

The A3 chart uses the MFDS annual statistics yearbook (식품의약품통계연보, Table 6-3-8), which records deer velvet imported as a *herbal medicine or pharmaceutical ingredient*. Figures show total annual value in USD, 2004–2024.

The records table uses the MFDS food-import portal (수입식품 정보마루), which records deer velvet imported as a *food ingredient*. These are individual shipment notifications filed under Korea's food safety system, 2016–2026.

A third channel also exists — sliced velvet under a separate product code (HS 0507.90.1190) — which neither source covers. Total Korean deer velvet imports are therefore higher than either source shows alone.

5. Trade reference

Exporter guidebook produced by Deer Industry New Zealand (DINZ) for velvet exporters.

Exporter guidebook

The DINZ Velvet Exporter Guidebook covers the requirements and procedures for exporting deer velvet from New Zealand to Korea and other Asian markets. It is produced by Deer Industry New Zealand for registered velvet exporters.

Topics covered:

- Korea import regulatory requirements and MFDS approval procedures
- Velvet grading and product classification standards
- Export documentation and customs declaration requirements
- Quarantine inspection and phytosanitary certificate requirements
- Market entry channels — pharmaceutical, food ingredient, and direct export
